construction water solutions

## WHAT WE DO

We are a specialist water treatment contractor and system manufacturer based in Southeast QLD. Whether you require mobile water treatment equipment for your dewatering project or a fully customised water treatment system for an industrial site, our team of experts will be able to develop a solution to meet your needs.

## THE CLEARPRO DIFFERENCE

By combining specialist water treatment knowledge with on-the ground services, clearpro is able to streamline projects for our customers and put complex procedures into practice. We are able to manage water treatment projects from preliminary reporting and system design, through to onsite implementation and compliance reporting.

Our dedicated approach to water treatment sets us apart from our competitors who can't match our service delivery and specialised knowledge. Clearpro focuses on building strong client relationships and is able to count some of Australia's largest construction companies as regular clients.

## EQUIPMENT HIRE

### » LB15 WATER TREATMENT SYSTEMS

Specifically designed for construction sites with large fluctuations in water quality and flow rate.

### » DSR CHEMICAL DOSING SYSTEMS (pH correction)

Patented DSR chemical dosing units designed to be highly portable and simple to operate. Primarily used for pH correction, our range of in-line dosing units can be equipped to accurately dose a range of water treatment chemicals.

### » CONTAINERISED WATER TREATMENT SYSTEMS

Clearpro's larger footprint containerised treatment systems are ideal for projects with high inflow rates or difficult to treat water streams.

### » CUSTOM BUILD SYSTEMS

Clearpro is able to adapt our existing equipment fleet or completely re-design a system from the ground-up to suit a particular project. Including wall mounted pH correction systems, filtration, sterilisation and sludge press systems.

## OUR SERVICES

### » TREATMENT SYSTEM FABRICATION

The team at CLEARPRO design and construct a variety of water treatment systems for different applications. All of our fabrication work is done locally in Queensland using the best quality components and sensors on the market.

Our designs are based on extensive field experience operating our own equipment. Our continued focus on improvement gives our equipment the edge over generic water treatment systems.

### » DEWATERING

Our treatment units are perfect for dewatering projects and are equipped to provide PH modification, flocculation and filtration. With a variety of equipment options we can cater for both high and low volumes.

Applications include:

- ◇ Pipeline works
- ◇ Underground infrastructure installations
- ◇ Basement construction

## OUR SERVICES

### » SEDIMENT POND MANAGEMENT

Accumulated stormwater will typically require treatment prior to discharge. CLEARPRO can manage the entire process or simply be engaged to provide water treatment.

Our systems are suitable for applications such as:

- ◇ High efficiency sediment basin (HES)
- ◇ Construction site stormwater ponds
- ◇ Roadside sediment ponds

### » ENVIRONMENTAL COMPLIANCE

Our environmental scientists carry out all necessary compliance testing and reporting requirements, including:

- ◇ Water quality testing and laboratory analysis
- ◇ Monitoring reports
- ◇ Compliance reports
- ◇ Dewatering management plans
